

WORLD AI

IMAGINE. INNOVATE. IGNITE.

ABOUT

World AI is a blockchain-based consulting platform for the field of AI artificial intelligence. By combining web3.0 technology and AI, World AI focuses on establishment of complete data consultation platform that provides convenient blockchain consultation channels for the crypto currency market.

With World AI, users can access a wealth of information and expert advice on the latest developments and applications of AI, helping them make informed decisions and stay ahead of the curve. World AI aims to create a gateway to the world of artificial intelligence, making it accessible and easy to navigate for everyone. It allows users to monetize their computing power, and to access on-demand cloud computing resources.

GOAL

The world of artificial intelligence (AI) is ever growing and focuses to transform every aspect of our lives. However, the adoption and integration of AI technology can be challenging for many businesses and individuals. The lack of accessible and reliable AI expertise creates barriers for those who want to leverage the power of AI to drive innovation and growth.

World AI aims to counter these barriers and democratize access to AI expertise. The goal is to create a blockchain-based consulting platform that provides convenient and reliable AI consultation services to individuals and businesses worldwide. Our platform leverages the latest AI algorithms and models to deliver personalized insights and recommendations to our clients, helping them unlock the full potential of AI.

VISION

World AI aims to meet requirements as:

- Delivering intelligence services to corporations, other organizations, and individuals.
- Fostering the emergence of increasingly powerful distributed general intelligence.
- Deploying artificial intelligence for ever-increasing benefit to as many humans and other sentient beings as possible.

World AI is designed to lay the groundwork for the emergence of a self-modifying, decentralized “artificial cognitive organism” with the eventual potential for general intelligence and beneficial ethical characteristics beyond the human level. It is a practical design inspired by long theoretical thinking and prototyping by our founders regarding artificial general intelligence and open-ended intelligence.

MISSION

Our mission is to make create a gateway of reliable and empowering AI accessible to everyone, regardless of their technical expertise or financial resources. We are committed to breaking down the barriers that prevent people from accessing the benefits of AI, and to empowering our clients with the knowledge and tools they need to succeed in the rapidly evolving world of AI.

COMMUNITY ENGAGEMENT

World AI involves leveraging social media, media coverage, and conferences to increase brand awareness and adoption of the ecosystem. The project will also actively engage with its community through various initiatives and educational campaigns to increase awareness about AI and blockchain technology:

World AI will have active social media channels, including Twitter, Telegram, Reddit, and Medium, to engage with the community and share updates on the project's development.

It will also leverage influencer marketing to reach a wider audience and increase engagement on its social media channels.

It will actively engage with its community through various initiatives, including a bounty program, a referral program, and a loyalty program.

It will also launch educational campaigns to increase awareness about the benefits and potential of AI and blockchain technology.

VALUE PROPOSITION OF WORLD AI

The value proposition of World AI is multifaceted and can vary depending on the specific industry and application. Some key value propositions are as below:

1. Improved Efficiency and Productivity

World AI can automate repetitive tasks, analyze large amounts of data quickly, and make decisions based on patterns and insights resulting in cost savings, time optimization, and enhanced operational performance.

2. Enhanced Decision-Making

World AI can process and analyze vast amounts of data from diverse sources to generate insights and recommendations, enabling better decision-making in real-time. This can lead to improved outcomes across healthcare, finance, marketing, and more domains.

3. Advanced Personalization

World AI can analyze and understand customer preferences, behaviors, and needs, enabling personalized experiences and recommendations. This can improve customer satisfaction and loyalty and increase revenue through targeted marketing and customized product offerings.

4. Innovation and New Opportunities

World AI can enable new business models, products, and previously impossible services. It can drive innovation in automation, smart cities, digital assistants, and other emerging technologies, creating new economic opportunities and transforming industries.

5. Enhanced User Experience

World AI can provide seamless user experiences through natural language processing, computer vision, and other AI technologies. This can improve user interactions with applications, and devices, enhancing user satisfaction.

6. Competitive Advantage

World AI will offer a competitive edge to industries by improving their processes, products, and services and staying ahead. It can enable organizations to adapt to changing market dynamics and remain relevant in a rapidly evolving business landscape.

WORLD AI TOKEN

World AI is set to launch its utility token used by the community for transactions management and decentralized community governance. Let's learn what this token offers:

1. Utility Token

Decentralized AI Marketplace Transactions, to enable global access to AI services, and for future autonomous AI interaction.

2. Governance & Voting

World AI token holders participate in increasing levels of governance decision making within the platform.

3. Staking

Community can stake World AI tokens to provide Platform liquidity, and be compensated for their contribution.

4. Ecosystem Airdrops

5% of total supply will be distributed among the community members in the form of airdrops and rewards.

NEED OF AI SOLUTIONS

Recent advances in AI have driven an explosion of intelligent applications that will dramatically change the way we live. Applications can be found in every vertical and functional area, from manufacturing to HR. For example, manufacturers are using deep neural networks to quickly identify manufacturing flaws, far surpassing the speed and accuracy of their existing techniques, and HR professionals are using AI to help them sift through thousands of resumes to build a short list of candidates efficiently.

All these applications are driven by AI algorithms that are packaged as AI services that provide customer solutions. World AI is a network of such AI services that anyone can contribute to, making cutting-edge AI techniques available to everyone.

Why Join World AI ?

We invite the wider community to join us on this exciting and unpredictable journey, as we dive headfirst into the unknown world. By join World AI community, you'll have the opportunity to shape the course of the experiment, contribute to our collective understanding of AI, blockchain, and DAOs, and potentially play a role in charting a new path for the future of technology and governance. So, buckle up, and let's see where this wild ride takes us!

USE CASE AND APPLICATION

World AI platform can be used by artists, engineers, designers, and developers for a wide range of GPU workloads and applications, enabling new forms of creative, scientific, and industrial production that would be cost prohibitive on local infrastructure or centralized service. World AI offers vast array of uses:

1. Visual Effects and Motion Graphics

With World AI, independent artists and studios can produce large-scale 3D visual effects with cheaper upfront capital expenditure. Artists can also leverage nearly unlimited on-demand GPU resources to render scenes at higher resolutions or multiple output formats, enabling more latitude in post-production process for virtual camera movements, tracking shots, pans, and other effects.

2. Virtual Assets and Non-Fungible Tokens (NFTs)

Using the World AI platform, 3D artists can create non-fungible tokens and virtual assets. Artists can also create and tokenize next generation virtual assets, like interactive ORBX files, enabling the monetization of portable 3D virtual assets.

3. Virtual Production

Directors and Cinematographers can create large-scale rendered 3D environments to transform the filmmaking process, enabling them to test unlimited takes and push the boundary of virtually created cinematic worlds.

Some more applications which World AI can make easier:

- a. Projection Mapping
- b. Product Design
- c. Architecture
- d. Visualization
- e. Augmented Reality
- f. Gaming
- g. Artificial Intelligence

WORK WITH WORLD AI

World AI platform welcomes you regardless of where you are in the world, what your level of technical expertise is, or your familiarity with blockchains. Learn about all the roles in which you can choose to join the ecosystem.

WORLD AI FOR ITS COMMUNITY

World Ai For Its Community

We understand that community is at the heart of any successful blockchain project. We are committed to building a strong and engaged community of users and supporters who share our vision of creating a more decentralized and transparent world.

To achieve this, we have implemented a range of initiatives and programs designed to foster collaboration, communication, and engagement among our users and supporters.

a. Communication

We will maintain open and regular communication channels with our community members through our social media accounts and other platforms. This allows us to keep our community members informed about our latest developments, upcoming events, and other important news.

b. AMAs:

We organize and participate in a range of community events, including webinars, and online forums. These events provide opportunities for our community members to network, learn from each other, and share their ideas and experiences.

c. Rewards & Incentives

We offer a range of rewards and incentives to our community members, including airdrops, referral programs, and other initiatives. These programs are designed to incentivize community members to actively participate in the development and growth of the ecosystem.

d. Community Feedback

We actively seek and listen to feedback from our community members on our platform, features, and services. This feedback helps us to continually improve and enhance the World AI ecosystem based on the needs and preferences of our users.
